ALOHAR MiniOS

User Manual

INTRODUCTION

Alohar MiniOS is a python-based Mini operating System that simulates basic operating system functions through a Command-Line Interface (CLI). The system allows users to manage files, monitor memory usage, simulate processes, view system information, and perform user authentication using built-in accounts.

The purpose of AloharOS Alpha is to demonstrate fundamental operating system concepts in a simplified environment.

SYSTEM REQUIREMENTS

There are two system requirements for Alohar MiniOs, these are: (1) Python 3.x should be installed, and (2) Windows Command Prompt (CMD) or terminal should be available.

INSTALLATION

The following are the steps for the installation of Alohar MiniOS:

1. Download or clone repository.
2. Extract the ZIP file to your preferred location.
3. Open the extracted folder.
4. Locate **Main.py** and ensure it is present.

HOW TO START MINIOS

The following are the steps on how to start Alohar MiniOS:

1. Open the project folder.
2. Locate **Main.py**.
3. Double-click **Main.py** to start AloharOS.

LOGIN INSTRUCTIONS

Enter a valid username and password when prompted by the system. Successful authentication will grant access to all available Alohar MiniOS commands. Log in using **one** of the demo accounts:

Administrator Account
Username: admin
Password: admin

Student Account
Username: student
Password: student

COMMAND LIST

The table below shows all the commands supported by AloharMiniOS. Each command includes its purpose, syntax, and example.

Command	Purpose	Syntax	Example
help	Displays all available commands	help	help
clear	Clears the terminal screen	clear	clear
uptime	Displays system uptime	uptime	uptime
time	Displays the current system date and time	time	time
whoami	Displays the currently logged-in user	whoami	whoami
users	Lists all available user accounts	users	users
login	Logs into the system	login	login
logout	Logs out the current user	logout	logout

systeminfo	Displays operating system information	systeminfo	systeminfo
pwd	Displays the current working directory	pwd	pwd
ls	Lists files and folders in the current directory	ls	ls
cd	Changes the current directory	cd <directory>	cd Documents
cat	Displays the contents of a text file	cat <filename>	cat notes.txt
process	Displays all running simulated processes	process	process
run	Starts a simulated process	run <process_name>	run Calculator
kill	Terminates a simulated process	kill <PID>	kill 1
memory	Displays memory usage information	memory	memory
allocate	Allocates memory	allocate <amount_MB>	allocate 512
free	Releases allocated memory	free <amount_MB>	free 256
exit	Exits AloharOS Alpha	exit	exit

COMMON ERRORS

The following are the common errors that users may encounter while using Alohar MiniOS. Understanding these errors will help users operate the system more effectively.

Invalid Command

Occurs when the user enters a command that is not recognized by the system.

Example:

```
[15:20:24] AloharOS# hi
Command is unknown: hi

[15:59:37] AloharOS# uptim
Command is unknown: uptim
```

Invalid Login Credentials

Occurs when the entered username or password does not match any existing account.

Example:

```
+--------------------------------------+
|            ALOHAROS LOGIN            |
+--------------------------------------+

Username: hi sir
Password (input hidden):
Invalid username or password. Please try again.
```

HOW TO EXIT MiniOS

To safely close Alohar MiniOS, use the exit command. After displaying the goodbye message, it will automatically close the system.

Note: Always use the **exit** command to properly end the MiniOS session.
